Make your assets available

Bitwards Access Platform™ is a cost effective digital access solution that allows to convert conventional spaces and products into a highly scalable services.

The platform offers a mobile access solution by removing the need to distribute and manage physical keys and share access to anyone, anywhere, securely while offering your end-users a superior user experience.

One app for multiple applications

Smart phone turns into a single hub for accessing multiple assets. Avoid hassle with numerous different apps that only work in a single application area.

Ecosystem of resources

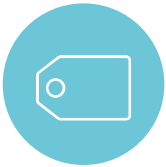

Bitwards facilitates an ecosystem of various devices offered by different manufacturers. This constantly growing ecosystem offers numerous methods and solutions to enable access sharing for various application areas.

The tiny and low-power Bitwards software is easy to integrate to any Bluetooth or NFC enabled device turning the device into a smart resource that can work with batteries and without any network connection

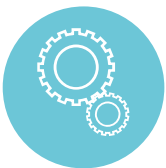

SaaS-service

For immediate start and quick and on-boarding. Free Apps are available in the App / Play Store

Branded SaaS-service

For customers who require their own brand for the service.

Platform as a Service (PaaS)

For customers who want to use their existing system and utilise the service API and mobile SDK's for customised solution.
